# Profiles of Arkansas Resident Fishing and Hunting License Customers 20082012 

## Introduction

This report analyzes Arkansas resident fishing and hunting license customer over a five year period beginning in 2008 and ending with 2012. The analysis has four main goals:

1. Profile customers by demographic characteristics
2. Identify the churn rate among license holders
3. Identify lag rate between renewals
4. Profile lapsing customers vs. avid customers

Arkansas fishing licenses are good for 365 days from the date of purchase while hunting licenses all expire on the same date, June 30. As a result, the analyses of lapsing and lag periods are handled differently for fishing and hunting. Regarding fishing licenses, the analysis is based on the number of days between licenses and the days that a license was held. For hunting licenses, the defined license years are used for the analysis and lapse and lag periods are based on missed license years. The churn rate analysis is not fundamentally different between anglers and hunters since it is based on the number of licenses purchased over the five year period.

## Customer Overview

Just over one million unique Arkansas residents purchased a fishing or hunting license between 2008 and 2012 (Table 1). Of these, $89.5 \%$ purchased a fishing license and $43.7 \%$ purchased a hunting license. Over one-half purchased fishing licenses only, a third purchased both fishing and hunting licenses, and $10.5 \%$ purchased only hunting licenses (Table 1 and Figure 1).

Table 1: 2008-2012 Fishing and Hunting License Customers.

| Customer Type | $\#$ | $\%$ |
| :--- | ---: | ---: |
| Fishing | 905,523 | $89.5 \%$ |
| Hunting | 442,296 | $43.7 \%$ |
| Fishing Only | 569,883 | $56.3 \%$ |
| Hunting Only | 106,656 | $10.5 \%$ |
| Both Fishing \& Hunting | 335,640 | $33.2 \%$ |
| Total Customers | $\mathbf{1 , 0 1 2 , 1 7 9}$ | $\mathbf{1 0 0 . 0 \%}$ |

Figure 1: Fishing vs. Hunting, 2008-2012 License Customers

## Anglers and Hunters by Age ${ }^{1}$

A comparison of the ages of anglers and hunters shows the two groups to be fairly similar in age although anglers were, on average, a little older (Table 2 and Figure 2). The age group with the largest difference between anglers and hunters is those under 18 years of age who made up $9 \%$ of hunters but only $5.3 \%$ of anglers. ${ }^{2}$

Table 2: Anglers and Hunters by Age.

| Age | Anglers |  | Hunters |  |
| :--- | ---: | ---: | ---: | ---: |
| Under 18 | 48,126 | $5.3 \%$ | 39,511 | $9.0 \%$ |
| 18 to 24 | 137,363 | $15.2 \%$ | 66,345 | $15.0 \%$ |
| 25 to 34 | 190,211 | $21.0 \%$ | 88,224 | $20.0 \%$ |
| 35 to 44 | 186,084 | $20.6 \%$ | 91,746 | $20.8 \%$ |
| 45 to 54 | 181,921 | $20.1 \%$ | 87,801 | $19.9 \%$ |
| 55 to 64 | 133,706 | $14.8 \%$ | 60,953 | $13.8 \%$ |
| 65 and Over | 26,843 | $3.0 \%$ | 6,447 | $1.5 \%$ |
| Total | $\mathbf{9 0 4 , 2 5 4}$ | $\mathbf{1 0 0 . 0} \%$ | $\mathbf{4 4 1 , 0 2 7}$ | $\mathbf{1 0 0 . 0} \%$ |
| Average Age | 39.1 |  | 37.7 |  |

[^0]Figure 2: Percent of Anglers and Hunters by Age Group.
$\square$ Hunters ■ Anglers

Customers who only fished were older on average (39.9) than those who either only hunted (37.3) or both fished and hunted (37.8) (Table 3, Figure 3). License customers who purchased both hunting and fishing licenses were more likely to be in the age groups between 25 and 54 years of age. Those who only purchased fishing licenses were proportionally more likely to be in the 55 and older age groups.

Table 3: Fishing or Hunting by Age.

| Age | Fishing Only |  | Hunting Only |  | Both Fishing \& Hunting |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Total | 569,883 | 100.0\% | 106,656 | 100.0\% | 334,371 | 100.0\% |
| Average Age | 39.9 |  | 37.3 |  | 37.8 |  |

Figure 3: Proportion of Customers Fishing or Hunting by Age Group.

## Anglers and Hunters by Gender

Women are twice as likely to purchase fishing licenses as they are to purchase a hunting license. They made up one-third of all fishing license customers between 2008 and 2012, but only $16.5 \%$ of hunting license customers (Table 4, Figure 4).

Table 4: Anglers and Hunters by Gender.

| Gender | Anglers |  | Hunters |  |
| :--- | ---: | ---: | ---: | ---: |
| Female | 297,626 | $33.0 \%$ | 72,766 | $16.5 \%$ |
| Male | 605,091 | $67.0 \%$ | 369,067 | $83.5 \%$ |
| Total | $\mathbf{9 0 2 , 7 1 7}$ | $\mathbf{1 0 0 . 0 \%}$ | $\mathbf{4 4 1 , 8 3 3}$ | $\mathbf{1 0 0 . 0 \%}$ |

Figure 4: Percent of Anglers and Hunters by Gender.

Women made up $43.8 \%$ of customers who fished only between 2008 and 2012. Compared to men, they were less likely to both fish and hunt than they were to only hunt (Table 5, Figure 5). However, more women both fished and hunted $(49,055)$ than only hunted $(23,711)$.

Table 5: Fishing or Hunting by Gender.

| Gender | Fishing Only |  | Hunting Only |  | Both Fishing \& Hunting |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | , | \% |  | \% |  | \% |
| Female | 248,571 | 43.8\% | 23,711 | 22.3\% | 49,055 | 14.6\% |

Figure 5: Percent Fishing or Hunting by Gender.

## Anglers and Hunters by Urbanization

This section breaks down anglers and hunters by rural, suburban, and urban classification based on their address ${ }^{3}$. Table 6 shows that large majority of anglers and hunters live in rural areas ( $63 \%$ and $73 \%$ respectively). Less than ten percent of anglers and only $6 \%$ of hunters live in urban neighborhoods. Just over a quarter of anglers and only two in ten hunters live in suburban neighborhoods. This is illustrated in Figure 6.

Table 6: Anglers and Hunters by Urban/Rural Area.

| Urban/Rural | Anglers |  | Hunters |  |
| :--- | ---: | ---: | ---: | ---: |
| Rural | 566,958 | $62.8 \%$ | 323,840 | $73.4 \%$ |
| Suburban | 255,249 | $28.3 \%$ | 89,983 | $20.4 \%$ |
| Urban | 81,281 | $9.0 \%$ | 27,358 | $6.2 \%$ |
| Total | $\mathbf{9 0 3 , 4 8 8}$ | $\mathbf{1 0 0 . 0 \%}$ | $\mathbf{4 4 1 , 1 8 1}$ | $\mathbf{1 0 0 . 0 \%}$ |

[^1]Figure 6: Percent of Anglers and Hunters by Urban/Rural Area.

Customers who purchased both fishing and hunting licenses were slightly more rural than those who purchased only hunting licenses (Table 7 and Figure 7). Over one-half of customers who purchased only fishing licenses were in rural neighborhoods.

Table 7: Fishing or Hunting by Urban/Rural Area.

| Urban/Rural | Fishing Only |  | Hunting Only |  | Both Fishing \& Hunting |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \# | \% | \# | \% | \# | \% |
| Rural | 319,653 | 56.2\% | 76,535 | 72.0\% | 247,305 | 73.8\% |
| Suburban | 187,687 | 33.0\% | 22,421 | 21.1\% | 67,562 | 20.2\% |
| Urban | 61,216 | 10.8\% | 7,293 | 6.9\% | 20,065 | 6.0\% |
| Total | 568,556 | 100.0\% | 106,249 | 100.0\% | 334,932 | 100.0\% |

Figure 7: Percent Fishing or Hunting by Urban/Rural Area.

## License Type

## Anglers by License Type

Over 99\% of anglers purchased the Resident Fisheries Conservation license between 2008 and 2012. Less than one-percent of resident anglers purchased either the 3-Day Trip Fishing License or the 3-Year Disabled Fishing License. Fewer than one-third ( $30.4 \%$ ) of anglers also purchased a Trout Permit in addition to their primary fishing license (Table 8).

Table 8: Anglers by License Types Purchased.

| License Type | $\#$ | $\%$ |
| :--- | ---: | ---: |
| Res Fisheries Conservation License | 900,129 | $99.4 \%$ |
| Res 3 Day Trip Fishing License | 3,858 | $0.4 \%$ |
| Res 3 Year Disabled Fishing License | 4,020 | $0.4 \%$ |
| Trout Permit - Resident | 275,286 | $30.4 \%$ |
| Total Anglers | $\mathbf{9 0 5 , 5 2 3}$ |  |

Note: columns do not sum to $100 \%$ because anglers could have purchased more than one license type over the study period.

## Fishing License Customer Demographics

## Age

There was no clear difference in the ages of trout anglers vs. the general angling population. However, the two younger age groups were slightly less likely to have purchased a trout permit as were those age 65 years and older ${ }^{4}$ (Table 9). Disabled license buyers were much more likely to be in the 45 to 64 age groups compared to all anglers.

## Gender

Women were less likely to purchase a trout permit in comparison to their overall participation rate. They made up one-third of all anglers but only $28.5 \%$ of trout anglers (Table 10). Disabled fishing license buyers were more likely to be women compared to the overall participation rates of women and men.

## Urban/Rural

Anglers who purchased a 3-Day Trip license were much more likely to be suburban or urban than the average anglers (Table 11). Only 45\% of these customers were from rural areas vs. $63 \%$ of all anglers. Urban and suburban anglers were more likely to have purchased a trout permit in comparison to their overall participation rate. $11.2 \%$ of trout permit customers were from urban areas compared to only $9 \%$ of anglers overall.

## Hunters by License Type

A large majority of resident hunters (81\%) purchased a Sportsman license between 2008 and 2012 (Table 12). Over one-third purchased the Wildlife Conservation license and $20.9 \%$ purchased a Waterfowl stamp.

Table 12: Hunters by License Types Purchased.

| License Type | $\#$ | $\%$ |
| :--- | ---: | :---: |
| Res Wildlife Conservation License | 159,409 | $36.0 \%$ |
| Res Sportsman License | 359,121 | $81.2 \%$ |
| Res Waterfowl Stamp | 92,656 | $20.9 \%$ |
| Total Hunters | $\mathbf{4 4 2 , 2 9 6}$ | $\mathbf{1 0 0 . 0 \%}$ |

Note: columns do not sum to $100 \%$ because hunters could have purchased more than one license type over study period.

## Hunting License Customer Demographics

## Age

Wildlife Conservation license buyers were a little younger than those purchasing the Sportsman license (Table 13). Hunters age 18 to 24 were especially more likely to purchase the conservation license relative to their overall participation rate. Waterfowl hunters we much younger than the general hunting population with an average age of 33.9 compared to 37.7 for all hunters. Waterfowl hunters were more likely to be in the under 35 year old age groups compared to all hunters.

## Gender

Compared to their overall participation rate (16.5\%), Wildlife Conservation license buyers were more likely to be women making up $20 \%$ of customers purchasing that license. Women were a lot less likely to purchase a Waterfowl stamp compared to their overall participation rate making up $16.5 \%$ of all hunters but only $6.2 \%$ of waterfowl hunters.

## Urban/Rural

Sportsman license customers were even more rural than hunters who purchased the Wildlife Conservation license with (Table 15). 75 percent of Sportsman customers were from rural areas vs. 70\% of Wildlife Conservation customers. Similar to trout fishing, waterfowl stamp customers were more likely to be urban or suburban compared to all hunters. Suburban areas accounted for $26 \%$ of waterfowl hunters but only $20 \%$ of all hunters. Urban areas accounted for $10 \%$ of waterfowl hunters vs. only $6 \%$ of all hunters.

## Frequency of License Purchase

This section looks at the number of fishing licenses purchased by anglers and hunting licenses purchased by hunters over the five year study period. Since hunting licenses are based on a fixed license year ending on June 30, frequency was measured by the number of years in which they purchased a hunting license. Fishing licenses are valid for three days, 365 days, or three years from the date of purchase. Therefore, frequency of purchase is measured by the number of licenses purchased because it is possible for an angler to purchase more than one license in a given calendar year and to even have overlapping licenses. A small number of anglers purchased more the five annual licenses due to this overlap

Almost one-half of anglers purchased only one license during the five year period while one-third of hunters purchased only once in five years (Table 16). Only $7 \%$ of anglers purchased five or more licenses while $28 \%$ of hunters purchased in each of the five years.

Table 16: Anglers and Hunters by Licenses Purchased 2008-2012.

| Number of <br> Licenses 2008- <br> 2012 | Anglers (Fishing <br> Licenses |  | Hunters (Hunting <br> Licenses) |  |
| :---: | :---: | :---: | :---: | :---: |
| 1 | 430,717 | $47.6 \%$ | 144,828 | $32.9 \%$ |
| 2 | 191,982 | $21.2 \%$ | 67,736 | $15.4 \%$ |
| 2 | 125,868 | $13.9 \%$ | 51,033 | $11.6 \%$ |
| 3 | 92,449 | $10.2 \%$ | 53,274 | $12.1 \%$ |
| 4 | 63,881 | $7.1 \%$ | 123,152 | $28.0 \%$ |
| $5+$ | 904,897 | $100.0 \%$ | 440,023 | $100.0 \%$ |
| All |  |  |  |  |

Figure 8 illustrates how hunters are more likely to purchase a license either only once during the five years or every year than they are to purchase a license occasionally. On the other hand, the proportion of anglers declines steadily by frequency of purchase.

Figure 8: Distribution of Anglers and Hunters by Number of Licenses Purchased 2008-2012.

## Angler Frequency

Nearly on-half of all anglers who purchased a license between 2008 and 2012 purchased only once ( Figure 9). Approximately one-third purchased two or three licenses during this time. Less than two out of ten anglers purchased four or more licenses during the five year period.

Figure 9: Distribution of Anglers by Number of Licenses Purchased.

Anglers in the 35 to 64 year old age groups had the highest purchase frequency. Within this group, 45 to 54 year olds purchased the most often with $10.8 \%$ purchasing five or more licenses and another $12.6 \%$ purchasing four licenses. This compares to the 18 to 24 year old age group where only $3.4 \%$ purchased five or more licenses during the five year study period (Table 17). Note that the low purchase frequency by anglers 65 and older doesn't account for lifetime license purchases. Even if these were included, however, their purchase frequency would remain low since these licenses only need to be purchased once.

Table 17: Fishing License Purchase Frequency by Age.

| Number of | Under 18 |  | $\mathbf{1 8}$ to $\mathbf{2 4}$ |  | $\mathbf{2 5}$ to $\mathbf{3 4}$ |  | $\mathbf{3 5}$ to $\mathbf{4 4}$ |  |

## Hunter Frequency

Approximately one-third of hunters purchased a hunting license only one year out of the five years covered by this study. In contrast to anglers, however, almost that many ( $28 \%$ ) purchased a license in each of the five years. This may be due to the greater investment in the sport by regular hunters compared to anglers. Over one-third purchased a hunting license in two, three, or four of the five years.

Figure 10: Distribution of Hunters by Number of Licenses Purchased.

Similar to anglers, the most frequent hunters are those in the 35 to 54 year old age categories. Over onethird of hunters in these age categories purchased a hunting license in each of the five years (Table 20). Additionally, hunters in this range were more likely to purchase every year than they were to only purchase only one year. These are the only age categories for which this is true. Purchase frequency drops off steeply in the 64 and older group due to the fact that these hunters become eligible to purchase a lifetime hunting license.

Table 20: Hunting License Purchase Frequency by Age.

| Years | Under 18 |  | 18 to 24 |  | 25 to 34 |  | 35 to 44 |  |

## Lag Rate

This section looks at the average time lag between licenses for those who purchased more than one license during the five-year study period. For hunters, the lag was measured in missed years between licenses. For example, a hunter who purchased a license for the 2008-2009 season and then skipped 2009-2010 before purchasing a license again for 2010-2011 had a lag of one year between licenses. For anglers, the actual number of days between the expiration of one license before the purchase of another was counted. This was then converted to years to make it comparable to hunters.

The average angler went almost one-half a year without a valid fishing license before renewing (Table 23). This compares to an average of less than two-tenths of a year ( 0.16 ) missed by the average hunter who renewed a license. Part of this may be due to greater avidity among hunters than anglers. However, it is also likely that the structure of fishing licenses compared to hunting licenses since an angler can wait until their next fishing trip to purchase a license in order to maximize the value they receive.

Table 23: Lag between Licenses.

|  | Average Years <br> Between <br> Renewals |
| :--- | :---: |
| Anglers | 0.46 |
| Hunters | 0.16 |

## Angler Lag Rates

Anglers in the 55 to 64 year old age group were the quickest to renew their licenses with an average lag of just over four months ( 0.34 years). Anglers in the 18 to 34 year old age groups lapsed for over half a year on average. Anglers under the age of 18 had lower than average lapse rates along with the two older age categories (Table 24).

Table 24: Lag between Fishing Licenses by Age.

| Age | Average Years <br> Between <br> Renewals |
| :--- | :---: |
| Under 18 | 0.40 |
| 18 to 24 | 0.57 |
| 25 to 34 | 0.52 |
| 35 to 44 | 0.48 |
| 45 to 54 | 0.43 |
| 55 to 64 | 0.34 |
| 65 and Over | 0.40 |
| All Renewing <br> Anglers | $\mathbf{0 . 4 6}$ |

Women had longer average lag periods between fishing licenses than did men (Table 25). Women lapsed for over half a year on average.

Table 25: Lag between Fishing Licenses by Gender.

| Gender | Average Years <br> Between <br> Renewals |
| :--- | :---: |
| Women | 0.56 |
| Men | 0.43 |
| All Renewing <br> Anglers | $\mathbf{0 . 4 6}$ |

Rural anglers renewed their licenses sooner, on average, than did suburban and urban anglers (Table 26). Rural anglers had an average lag of 0.44 years between licenses while urban anglers had a lag of half a year. However, this is a difference of only 21 days.

Table 26: Lag between Fishing Licenses by Urban/Rural Area.

|  | Average Years <br> Between <br> Renewals |
| :--- | :---: |
| Urban/Rural | 0.44 |
| Rural | 0.49 |
| Suburban | 0.50 |
| Urban <br> All Renewing <br> Anglers | $\mathbf{0 . 4 6}$ |

Anglers who purchased a 3-day license during the five year study period had the longest average lag between licenses at 0.8 years, or 293 days (Table 27). Three-year disabled license customer had the shortest average lag between licenses at only 0.19 years ( 69 days). Anglers who also purchased a hunting license during the study period or a trout permit also renewed their licenses sooner than the average angler.

Table 27: Lag between Fishing Licenses by License Type.

| Types of Licenses Purchased | Average Years <br> Between <br> Renewals |
| :--- | :---: |
| Res Fisheries Conservation License | 0.46 |
| Res 3 Day Trip Fishing License | 0.80 |
| Res 3 Year Disabled Fishing License | 0.19 |
| Trout Permit - Resident | 0.41 |

| Also Hunts (Any Hunting License) | 0.36 |
| :--- | :--- |
| All Renewing Anglers | $\mathbf{0 . 4 6}$ |

## Hunter Lag Rates

Hunters 18 to 24 years old and 55 and older had higher than average lag rates between licenses (Table 28). Hunters over 64 years of age skipped a third of a year on average between licenses. Since a hunter either skipped a year or didn't, this translates into one out of every three hunters in this age category lapsing for a year between licenses purchases. Hunters under 18 years of age and those in the 35 to 54 year old age groups had the lowest average lag rate of only 0.14 years (or 14 out of every 100 hunters in these age groups skipped a year before renewing).

Table 28: Lag between Hunting Licenses by Age.

| Age | Average Years <br> Between <br> Renewals |
| :--- | :---: |
| 18 to 24 | 0.14 |
| 25 to 34 | 0.18 |
| 35 to 44 | 0.15 |
| 45 to 54 | 0.14 |
| 55 to 64 | 0.14 |
| 65 and Over | 0.20 |
| All Renewing <br> Hunters | 0.32 |

Women hunters had greater average lags between licenses than men with an average lag rate of 0.2 compared to 0.15 (Table 29).

Table 29: Lag between Hunting Licenses by Gender.

|  | Average Years <br> Between <br> Renewals |
| :--- | :---: |
| Gender | 0.20 |
| Women | 0.15 |
| Men | $\mathbf{0 . 1 6}$ |

There was not much difference between the average lag rates of rural, suburban, and urban hunters (Table 30). However, rural hunters did have a slightly lower lag rate of 0.15 years compared to 0.17 and 0.18 years respectively for suburban and urban hunters.

Table 30: Lag between Fishing Licenses by Urban/Rural Area.

|  | Average Years <br> Between <br> Renewals |
| :--- | :---: |
| Urban/Rural | 0.15 |
| Rural | 0.17 |
| Suburban | 0.18 |
| Urban <br> All Renewing <br> Hunters | $\mathbf{0 . 1 6}$ |

Waterfowl stamp buyers had the lowest lag rate between hunting licenses of 0.11 years between licenses (Table 31). Wildlife Conservation license buyers had a higher than average lag rate of 0.21 years between licenses.

Table 31: Lag between Hunting Licenses by License Type.

|  | Average Years <br> Between <br> Renewals |
| :--- | :---: |
| Res Wildlife Conservation License | 0.21 |
| Res Sportsman License | 0.14 |
| Res Waterfowl Stamp | 0.11 |
| Angler (Any Fishing License) | 0.15 |
| All Renewing Hunters | $\mathbf{0 . 1 6}$ |

## Lapsed vs. Avid License Customers

This section compares "lapsed" license customers to "avid" license customers in order establish differences between these two groups. A lapsed angler is defined as an angler whose last license expired before 2012 while a lapsed hunter is one who did not purchase a license for the 2012-13 license year after purchasing in one of the preceding four years. An avid angler purchased five or more licenses during the five year period (and was not lapsed) and an avid hunter purchased a license for each of the five years. Note that the lapsed and avid groups are mutually exclusive but do not account for all anglers and hunters who purchased a license between 2008 and 2012.

Lapsed anglers accounted for $37.5 \%$ of all the anglers from the five year study period while lapsed hunters accounted for $43.3 \%$ of all hunters (Table 32). Only $8.4 \%$ of anglers could be considered avid while $27.8 \%$ of hunters were avid customers, having purchased in all five years.

Table 32: Lapsed and Avid Anglers and Hunters.

|  | Anglers |  | Hunters |  |
| :--- | ---: | ---: | ---: | ---: |
| Lapsed/Avid | $\#$ | $\%$ | $\#$ | $\%$ |
| Lapsed | 339,676 | $37.5 \%$ | 191,450 | $43.3 \%$ |
| Avid | 76,234 | $8.4 \%$ | 123,152 | $27.8 \%$ |
| All Anglers | $\mathbf{9 0 5 , 5 2 3}$ | $\mathbf{1 0 0 . 0 \%}$ | $\mathbf{4 4 2 , 2 9 6}$ | $\mathbf{1 0 0 . 0 \%}$ |

## Lapsed/Avid Anglers

Avid anglers are slightly older than the average angler with an average age of 42.8 compared to 39.1 for all anglers (Table 33). Avid anglers are more likely to be in the 35 to 64 age categories compared to the average angler. This is illustrated clearly in Figure 11.

Table 33: Lapsed and Avid Anglers by Age.

| Age | Lapsed |  | Avid |  | All Anglers |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \# | \% | \# | \% | \# | \% |
| Under 18 | 15,066 | 4.4\% | 1,382 | 1.8\% | 48,126 | 5.3\% |
| 18 to 24 | 52,380 | 15.4\% | 5,774 | 7.6\% | 137,363 | 15.2\% |
| 25 to 34 | 70,730 | 20.8\% | 12,927 | 17.0\% | 190,211 | 21.0\% |
| 35 to 44 | 65,848 | 19.4\% | 18,141 | 23.8\% | 186,084 | 20.6\% |
| 45 to 54 | 63,113 | 18.6\% | 22,993 | 30.2\% | 181,921 | 20.1\% |

| 65 and Over* | 16,907 | 5.0\% | 483 | 0.6\% | 26,843 | 3.0\% |
| Total | 339,349 | 100.0\% | 76,221 | 100.0\% | 904,254 | 100.0\% |
| Average Age | 40.1 |  | 42.8 |  | 39.1 |  |

[^3]Figure 11: Percent Lapsed and Avid Anglers by Age.

Women are slightly more likely to be lapsed than men, accounting for $36.4 \%$ of lapsed anglers compared to $33 \%$ of all anglers (Table 34 and Figure 12). Men are much more likely to be avid compared to the general fishing population, accounting for $85.4 \%$ of avid anglers.

Table 34: Lapsed and Avid Anglers by Gender.

| Gender | Lapsed |  | Avid |  | All Anglers |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \# | \% | \# | \% | \# | \% |
| Women | 122,679 | 36.4\% | 11,109 | 14.6\% | 297,626 | 33.0\% |
| Men | 214,240 | 63.6\% | 65,117 | 85.4\% | 605,091 | 67.0\% |
| Total | 336,919 | 100.0\% | 76,226 | 100.0\% | 902,717 | 100.0\% |

Figure 12: Percent Lapsed and Avid Anglers by Gender.

Anglers who purchased a trout permit between 2008 and 2012 are less likely to be lapsed and considerably more likely to be avid than the average anglers (

Table 35). They accounted for $25.6 \%$ of lapsed anglers and $43.6 \%$ of avid anglers compared to $30.4 \%$ of all anglers. Anglers who also purchased a hunting license during the study period were also much more likely to be avid anglers, accounting for $76.7 \%$ of avid anglers while only accounting for $37.1 \%$ of all anglers.

Table 35: Lapsed and Avid Anglers by Type of License.

| Types of Licenses Purchased | Lapsed |  | Avid |  | All Anglers |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \# | \% | \# | \% | \# | \% |
| Res Fisheries Conservation License | 337,377 | 99.3\% | 76,233 | 100.0\% | 900,129 | 99.4\% |
| Res 3 Day Trip Fishing License | 2,376 | 0.7\% | 131 | 0.2\% | 3,858 | 0.4\% |
| Res 3 Year Disabled Fishing License | 423 | 0.1\% | 177 | 0.2\% | 4,020 | 0.4\% |
| Trout Permit - Resident | 86,832 | 25.6\% | 33,270 | 43.6\% | 275,286 | 30.4\% |
| Hunter (Any Hunting License) | 86,421 | 25.4\% | 58,500 | 76.7\% | 335,640 | 37.1\% |
| Total | 339,676 | 100.0\% | 76,234 | 100.0\% | 905,523 | 100.0\% |

Lapsed anglers are slightly more likely to be from urban or suburban neighborhoods compared to the average angler (

Table 36 and Figure 13). Avid anglers are much more likely to be rural with nearly three-quarters (71.7\%) coming from rural areas compared to $62.8 \%$ of all anglers.

Table 36: Lapsed and Avid Anglers by Urban/Rural Classification of their Residence.

| Urban/Rural | Lapsed |  | Avid |  | All Anglers |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \# | \% | \# | \% | \# | \% |
| Rural | 204,648 | 60.4\% | 54,507 | 71.7\% | 566,958 | 62.8\% |
| Suburban | 101,544 | 30.0\% | 16,726 | 22.0\% | 255,249 | 28.3\% |
| Urban | 32,365 | 9.6\% | 4,827 | 6.3\% | 81,281 | 9.0\% |
| Total | 338,557 | 100.0\% | 76,060 | 100.0\% | 903,488 | 100.0\% |

Figure 13: Percent Lapsed and Avid Anglers by Urban/Rural Classification of their Residence.

## Lapsed/Avid Hunters

Both lapsed and avid hunters are slightly older on average than the general hunting (
Table 37). Lapsed hunters are more likely to be 55 or older while avid hunters are more likely to be in the 35 to 54 age groups. This is clearly illustrated in Figure 14. Over half of all avid hunters were between 35 and 54 years old.

Table 37: Lapsed and Avid Hunters by Age.

| Age | Lapsed |  | Avid |  | All Hunters |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \# | \% | \# | \% | \# | \% |
| Under 18 | 15,998 | 8.4\% | 3,364 | 2.7\% | 39,511 | 9.0\% |

| 65 and Over* | 5,034 | 2.6\% | 304 | 0.2\% | 6,447 | 1.5\% |
| Total <br> Average Age | $191,025$ | 100.0\% | $123,098$ <br> 39.7 | 100.0\% | $441,027$ <br> 37.7 | 100.0\% |

*Lapsed and Avid rates for hunters 65 and over don't account for the possibility that they may have purchased a lifetime license. However, the inclusion of lifetime licenses would not reveal anything about the lapse rate or avidity of these hunters since they don't need to be renewed once purchased.

Figure 14: Percent Lapsed and Avid Hunters by Age.
$\square$ All Hunters $\quad$ Avid $\square$ Lapsed

Similar to lapsed anglers, lapsed hunters are more likely to be women compared to the general population while avid hunters are more likely to be men (Table 38 and Figure 15). Women made up $19.8 \%$ of lapsed hunters but only $8.1 \%$ of avid hunters.

Table 38: Lapsed and Avid Hunters by Gender.

| Gender | Lapsed |  | Avid |  | All Hunters |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
|  | $\#$ | $\%$ | $\#$ | $\%$ | $\#$ |  |
| \# |  | $\%$ |  |  |  |  |
| Memen | 37,759 | $19.8 \%$ | 9,924 | $8.1 \%$ | 72,766 | $16.5 \%$ |
| Total | 153,413 | $80.2 \%$ | 113,218 | $91.9 \%$ | 369,067 | $83.5 \%$ |

Figure 15: Percent Lapsed and Avid Hunters by Gender.

Lapsed hunters were more likely to have purchased a Wildlife Conservation license than a Sportsman license compared to the avid hunters or the general hunting population (Table 39). Nearly all avid hunters (97\%) purchased a Sportsman license at one time during the five year study period compared to $70.5 \%$ of lapsed hunters. Waterfowl hunters are more likely to be avid hunters making up $31 \%$ of avid hunters compared to $21 \%$ of the general hunting population and only $14 \%$ of lapsed hunters. Hunters who also purchased a fishing license were also much more likely to be avid hunters accounting for $90 \%$ of avid hunters.

Table 39: Lapsed and Avid Hunters by Type of License.

| Types of Licenses Purchased | Lapsed |  | Avid |  | All Hunters |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | \% | \# | \% | \# | \% |
| Res Wildlife Conservation License | 79,591 | 41.6\% | 27,908 | 22.7\% | 159,409 | 36.0\% |
| Res Sportsman License | 135,038 | 70.5\% | 119,716 | 97.2\% | 359,121 | 81.2\% |
| Res Waterfowl Stamp | 27,247 | 14.2\% | 38,007 | 30.9\% | 92,656 | 20.9\% |
| Angler (Any Fishing License) | 128,118 | 66.9\% | 110,998 | 90.1\% | 335,640 | 75.9\% |
| Total | 191,450 | 100.0\% | 123,152 | 100.0\% | 442,296 | 100.0\% |

The urban/rural distribution of lapsed vs. avid hunters is not as great as it is for anglers. However, avid hunters are more likely to be rural accounting for $77.8 \%$ of avid hunters but only $71.4 \%$ of lapsed hunters and $73.4 \%$ of all hunters (Table 40 and Figure 16).

Table 40: Lapsed and Avid Hunters by Urban/Rural Classification of their Residence.

| Urban/Rural | Lapsed |  | Avid |  | All Hunters |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
|  | $\#$ | $\%$ | $\#$ | $\%$ | $\#$ | $\%$ |

Figure 16: Percent Lapsed and Avid Hunters by Urban/Rural Classification of their Residence.

## Appendix A: Annual Anglers and Hunters and Participation Rates by Age, 2008-2012.

The analysis presented here examines anglers and hunters by age, individually for each of the five years in the study period to determine if there has been a trend towards older or younger license customers during this period. As seen in Table 41, average ages didn't change drastically over this period. However, anglers were on average slightly younger in 2012 compared to 2008 while hunters were slightly older, both by roughly two-tenths of a year.

Table 41: Average Age of Anglers and Hunters, 2008-2012.

|  | 2008 | 2009 | 2010 | 2011 | 2012 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Anglers | 41.2 | 41.2 | 41.3 | 41.3 | 41.0 |
| Hunters | 39.9 | 40.0 | 40.1 | 40.2 | 40.1 |

## Anglers by Single Year of Age

Table 42 shows anglers by single year of age for each of the five calendar years covered by the study period and the percent of all anglers by age. Note that for anglers 65 and older, this only represents those anglers that purchased one of the annual fishing licenses and those who held lifetime licenses are not included. Additionally, a handful of anglers were 15 years of age the year in which their license became valid but likely turned 16 before it expired.

Table 42 shows generally rising angler numbers for most ages between 2008 and 2012.
Table 42: Anglers by Age, 2008-2012

| Age | 2008 |  | 2009 |  | 2010 |  | 2011 |  | 2012 |  |

Table 43 shows the participation rates by age relative the general population of Arkansas. This is also shown in Figure 17 for just those anglers aged 16 to 65 . After 65 annual participation rates drop off steeply due to the availability of the lifetime license option. Figure 17 shows that angling participation
decreased slightly among older residents over the five year period but that there was no clear trend among younger ones. In general, though, the short time frame makes it difficult to establish any trends.

Table 43: Angling Participation Rates by Age, 2008-2012. ${ }^{5}$

| Age | 2008 | 2009 | 2010 | 2011 | 2012 |

Figure 17: Angler Participation by Age, 16 to 65 year olds, 2008-2012.

## Hunters by Single Year of Age

Table 44 shows hunters by single year of age for each of the five license years covered by the study period and the percent of all hunters by age. Note that for hunters 65 and older, this only represents those that purchased an annual hunting license and that those who held lifetime licenses are not included. Additionally, a handful of hunter were 15 years of age the calendar year in which their license became valid but likely turned 16 before it expired.

Table 44 shows generally declining hunter numbers for the younger ages and growing hunter numbers for older ages. However, the change in terms of the percent of all hunters is very small and hard to discern from this table.

Table 44: Hunters by Age, 2008-2012.

| Age | 2008 |  | 2009 |  | 2010 |  | 2011 |  | 2012 |  |

Table 45 and Figure 18 show declining hunting participation relative to the general population across almost all ages. The decline has been the largest among those in their mid to late forties with participation falling from $16.4 \%$ to $12.5 \%$ among 46 year olds. Participation also fell more than average among residents in their early 60's. However, as shown in Table 41, above, the average age of hunters rose slightly during this period.

Table 45: Hunter Participation Rates by Age, 2008-2012. ${ }^{6}$

## Appendix B: ESRI Urbanization Group Definitions

The rural/urban classifications used in this report are based on categories appended to individual license records by Address Coder software produced by ESRI. The information is based on the street address of the individual license holders. In the report tables, the eleven rural/urban categories are collapsed into three general types: Urban (categories U1, U2, U3, U4), Suburban (categories U5, U6, U7, U8) and Rural (categories U9, U10, U11).

Tapestry Segmentation includes 65 distinctive market segments to profile the diversity of the American population and two ways to summarize and simplify the differences-LifeMode groups and Urbanization groups. Segments within a LifeMode group share an experience such as being born in the same period or a trait such as affluence. Urbanization groups share a locale, from the urban canyons of the largest cities to the rural lanes of villages or farms.

Urbanization Group: U1 Principal Urban Centers I Principal Urban Centers I represents the most affluent populations of the country's largest metropolitan areas, those with populations of 2.5 million or more. Big-city residents live in apartments instead of single-family homes and take public transportation instead of driving. High population density exemplifies big-city life and its elements such as opportunities for high-paying jobs and paying higher rents and mortgages. Residents are young and just as likely to be single as married. Professional employment is typical, as is diversity. They take frequent vacations to visit family and friends. Foreign travel is important to the foreign-born population in this group. These urbanites embrace the amenities of city life from drinking coffee at the corner Starbucks to visiting museums, going dancing, and dining out. To stay fit, they walk or jog and work out at home or at a fitness club but rarely play team sports. They own the latest in electronics and go online for everything. Because they'd rather go out than stay in, home improvements and furnishings aren't important to them.

Urbanization Group: U2 Principal Urban Centers II Principal Urban Centers II represents the aspiring populations of the country's largest cities. This is the youngest (median age of 28.4 years) and most diverse population among the Urbanization groups including many recent arrivals in large "gateway" cities such as New York City, Los Angeles, and Chicago. Although the population density is second only to Principal Urban Centers I, it is still significantly lower. The search for affordable housing has moved these residents away from high-rises and into row houses, duplexes, and relatively lower-density buildings; the median home value is $\$ 151,256$. Their lifestyle is characterized not only by their locale but also by their youth and nascent socioeconomic status. Their median household income is $\$ 27,935$. They are more likely to use public transportation and less likely to own their homes. Families are also more common in Principal Urban Centers II. Residents are more likely to buy baby goods and groceries than electronic gadgets.

Urbanization Group: U3 Metro Cities I Upscale homeowners who live in densely populated cities characterize the eight segments in Metro Cities I. Their distinction lies in their choice of single-family homes in metropolitan cities. They embrace city living with the benefits of suburban single-family homes. Metro Cities I and Suburban Periphery I residents have the highest income among the

Urbanization groups. Both their median net worth and median home value are more than twice that of the national level. Most are older than 35 years. Approximately 60 percent of the households are married couples with and without children. These well-educated residents are avid readers, particularly of novels. They are very active financial investors, are health conscious, and enjoy gardening as well as traveling domestically and abroad. They are also world-class shoppers, buying everything from electric tools and small household appliances to women's shoes and clothing.

Urbanization Group: U4 Metro Cities II Ranked third for population density behind Principal Urban Centers I and II, Metro Cities II segments are found in larger cities and densely populated neighborhoods. The eight segments in Metro Cities II are neighborhoods in transition that include young starter households and retirees, singleperson households, and families. Most householders rent apartments in multiunit buildings. The young population remains mobile. Many are enrolled in college; most are still trying different jobs. The median household income of this group is $\$ 42,574$; however, the disparity of wealth that varies from $\$ 8,892$ (Dorms to Diplomas) to $\$ 103,158$ (Retirement Communities) illustrates the wide range of ages and lifestages in Metro Cities II. Consumers in this group look for economy and convenience. They prefer to drive four-door sedans, eat fast food, and shop at convenience stores. Because so many residents rent, few are interested in gardening and home improvement projects.

Urbanization Group: U5 Urban Outskirts I The segments in Urban Outskirts I live in higher-density suburban neighborhoods spread across metropolitan areas. Many of these neighborhoods are part of the main hub of social, cultural, and economic activity within the metro area. The proximity of higherdensity suburban areas to employment and entertainment venues combines the convenience of access with the advantage of affordable suburban living. The median household income of Urban Outskirts I residents is $\$ 57,756$, on par with the national median, although the population is slightly younger with a median age of 34 (compared to the national median of 36.9 years). As in established suburban communities, housing is dominated by single-family dwellings but includes rental apartments to accommodate younger households with growing incomes. Owners will tackle do-ityourself home improvement projects such as simple lighting and bathroom upgrades as well as painting and staining. They also enjoy caring for their lawns and gardens. They walk and swim for exercise; occasionally, they go bowling and fishing and play golf. Televisions are ubiquitous; however, residents are just as likely to read a newspaper or listen to the radio for news and entertainment.

Urbanization Group: U6 Urban Outskirts II The settlement density and housing preferences of Urban Outskirts II are similar to Urban Outskirts I-high-density suburban neighborhoods in metropolitan areas. However, here the homes are older and the population is younger, with a median age of 31.1 years. Homes can be single-family or multiunit dwellings; nearly half of the housing units were built before 1960. Homes are affordable, with a median home value of $\$ 72,730$. Half of the households own their own home, although the younger population is less affluent, with household income approximately half that of the national median. This group includes a variety of household types ranging from the ethnically diverse family households of Southwestern Families to the shared and single-person student households found in College Towns. They prefer Folger's coffee to Starbucks, current consumption to saving, and shopping at discount retailers instead of patronizing high-end stores.

Urbanization Group: U7 Suburban Periphery I Moving away from the epicenters of city living, peripheral suburban expansion represents lower-density housing development located in metropolitan and micropolitan statistical areas throughout the United States. Suburban Periphery I is the largest Urbanization summary group in Tapestry Segmentation, with the most population and households, in addition to the highest annual growth. Married-couple families dominate, approximately half with children, primarily living in their own single-family homes with two cars. They are more likely to employ a lawn and gardening service, hire a professional cleaning service, and invest in home remodeling and improvement projects. This well-educated group not only shares the top rank for current household income with Metro Cities I but has also accumulated the most wealth. Because of the suburban location, the median home value is approximately $\$ 100,000$ less than that of Metro Cities $I$. To keep up with the latest trends, they are constantly working on home improvement projects and furnishings. They own a variety of securities investments; many track their investments online frequently, and consult with a financial planner. They upgrade to the latest technology including bigscreen TVs, personal computers, and the necessary software and peripherals. Domestic travel is part of their lifestyle. They watch CNN at home.

Urbanization Group: U8 Suburban Periphery II Suburban Periphery II incorporates a population density similar to Suburban Periphery I but is more likely to be found in urban clusters of smaller cities in metropolitan areas. Housing is still predominantly owner-occupied, single-family homes but is older and closer to employment. Households are a mix, similar to that of the United States as a whole. More than half are married-couple families; one-quarter are singles who live alone. Although the median household income and home value are below the U.S. median, their median net worth is higher. This is the oldest Urbanization summary group in Tapestry Segmentation, with a median age of 41.4 years, and the highest concentration of householders who are older than 65 years. They like to watch a variety of sports, news, or documentary shows on television; occasionally, they will also watch a movie or primetime drama. They prefer to read newspapers instead of magazines but have an equal preference for fiction or nonfiction books. They prefer domestic sedans.

Urbanization Group: U9 Small Towns Small towns represent the ideal in American communitiesaffordable, close-knit, and apart from the hustle and bustle of city life. The Small Towns Urbanization summary group is typical. Active members of their communities, residents participate in public activities, fund-raising, and public meetings. They make a modest living, with a median household income of $\$ 39,244$, but their earnings are sufficient to afford a single-family or mobile home. Most of the labor force is employed in manufacturing, construction, or retail sectors; many are already retired. Heartland Communities is well settled, but Small Towns welcomes the ongoing migration of younger Crossroads and older Senior Sun Seekers. They are less likely to own a credit card; those who do rarely use it. Technology is not an integral part of life for this group. Many still use a dial-up Internet connection; few will shop online or by phone. Because of their location, satellite TV is preferred, but many households don't subscribe to cable or satellite TV. Favorite pastimes include gardening and lawn care.

Urbanization Group: U10 Rural I Small, nonfarm settlements, some of which are developing in suburban fringe areas, characterize the neighborhoods of Rural I. Married-couple families, many with grown
children who have left home, work hard in blue-collar occupations. Some are self-employed with small businesses or farms. Their median age of 40.5 years is slightly older than that of the United States median. Their median household income of $\$ 54,005$ enables them to enjoy the comforts of large singlefamily homes with ample land. Do-it-yourselfers, they are proud of their homes and gardens, investing in major home improvement projects and the tools to do the job. Residents of Rural I may not be farmers, but they embrace the country lifestyle, from their gardens and pets to their favorite pastimes of hunting and fishing. They drive domestic pickup trucks.

Urbanization Group: U11 Rural II Rural II countryside is the extreme opposite of urbanization. Low population density characterizes life in the country with its inconveniences such as the need for multiple vehicles and advantages such as affordable single-family homes with land. Most of the population lives in rural farm areas; the rest live in the country or in small villages and work in mining or manufacturing. Residents are slightly older than the U.S. median, with a median age of 39.8 years; some are already retired. Most are homeowners. Residents of Rural II areas are settled; few of them will move. Family and home are central in their lives. Their lifestyles reflect a preference for comfort and practicalitywestern or work boots to dress shoes, kerosene heaters to espresso/cappuccino makers, recliners to patio furniture, garden tillers to trash compactors.

[^0]:    ${ }^{1}$ Age is based on the first license purchased within the five year span of the study. Anglers and hunters 65 and older are only accounted for in this analysis if they purchased one of the daily, annual, or 3-year disabled licenses. Permanent license types are not accounted for due to the fact that these tell us nothing about a hunter or angler's frequency of purchase since licenses only need to be purchased once, rather than renewed on a regular basis.
    ${ }^{2}$ Appendix A contains annual breakdowns of hunters and anglers by single year of age and participation rates relative to the general population

[^1]:    ${ }^{3}$ The classification was made by processing all license records with Address Coder software prodiced by ESRI. See the appendix for a description of the location categories.

[^2]:    ${ }^{4}$ This refers only to those anglers who were 65 years or older and purchased an annual fishing license during the five year study period.

[^3]:    * Lapsed and Avid rates for anglers 65 and over don't account for the possibility that they may have purchased a lifetime license. However, the inclusion of lifetime licenses would not reveal anything about the lapse rate or avidity of these anglers since they don't need to be renewed once purchased.

[^4]:    ${ }^{5}$ Anglers as a percent of the general population.

[^5]:    ${ }^{6}$ Hunters as a percent of the general population.
