Recreational Shooting with a Traditional Centerfire Rifle - Overall

This section includes responses from individuals who are interested in trying a traditional centerfire rifle activity that they do not currently participate in; some individuals (77.8%) have shot with a traditional centerfire rifle within the past three years, while the remainder have not. Further chapters will be dedicated to specific target shooting activities, and will exclude all individuals who currently participate in that activity.

- 28.1% of those interested in shooting with a traditional centerfire rifle are interested in trying tactical style shooting activities (Table C.19).
- About one third (35.4%) of those interested in shooting three position haven't done so because they don't know how to get started.

Recreational Shooting with a Traditional Rimfire Rifle - Overall

This section includes responses from individuals who are interested in trying a traditional rimfire rifle activity that they do not currently participate in; some individuals (79.1%) have shot with a traditional rimfire rifle within the past three years, while the remainder have not. Further chapters will be dedicated to specific target shooting activities, and will exclude all individuals who currently participate in that activity.

- More than half (59.0%) of those interested in target shooting with a traditional rimfire rifle who have hunted within the past 3 years have hunted small game (Table R.18).
- More than one-third (34.4%) of those interested in trying cowboy action with a traditional rimfire rifle have not done so because this is not offered at ranges in their area (Table R4.19).

Recreational Shooting with an MSR - Overall

This section includes responses from individuals who are interested in trying an MSR activity that they do not currently participate in; some individuals (49.3%) have shot with an MSR within the past three years, while the remainder have not. Further chapters will be dedicated to specific target shooting activities, and will exclude all individuals who currently participate in that activity.

- About one-third (34.7%) of those interested in shooting an MSR are interested in trying 3 gun (Table M.19).
- 31.1% of those who have shot with an MSR in the past three years and are interested in shooting long range have not done so because this is not offered at ranges in their area (Table M6.19).

Recreational Shooting with a Shotgun - Overall

This section includes responses from individuals who are interested in trying a shotgun activity that they do not currently participate in; some individuals (77.1%) have shot with a shotgun within the past three years, while the remainder have not. Further chapters will be dedicated to specific target shooting activities, and will exclude all individuals who currently participate in that activity.

- Most (90.2%) of those interested in target shooting with a shotgun have hunted with a shotgun within the past three years (Table S.17).
- About one-fourth (26.3%) of those who are interested in shooting sporting clays, but have not shot with a shotgun within the past three years, have not done so because they do not own or have access to the proper equipment (Table S10.20).

Recreational Shooting with a Traditional or Compound Bow

This section includes only those responses from individuals who do not currently shoot with a traditional or compound bow, but would be interested in doing so.

- More than half (58.7%) of those interested in target shooting with a traditional or compound bow have gone hunting with a traditional or compound bow within the past 3 years (Table B.19).
- 61.1% of those who could be persuaded to try target shooting with a traditional or compound bow by joining a local range have used magazines within the past 3 months for recreational shooting entertainment or gathering information on shooting (Table B.27).

Recreational Shooting with an Air Rifle

This section includes only those responses from individuals who do not currently shoot with an air rifle, but would be interested in doing so.

- Almost two-thirds (65.6%) of those interested in target shooting with an air rifle have hunted small game in the past three years (Table A.20).
- The most common reason that interested individuals have not tried target shooting with an air rifle is that they do not own, or do not have access to, the proper equipment (37.2%) (Table A.21).
