

Crossover Participation

*Evaluating the Potential for Growth Within the Hunting and
Recreational Shooting Industry*

Prepared by Southwick Associates

December, 2017

Executive Summary

Results show most participants lapse because other activities have caught their attention. However, an invitation from a friend could motivate them to return or pursue a new activity. Similarly, many respondents indicated they no longer participate because their friends and family members do not participate anymore. The majority of respondents were introduced to hunting and shooting by their father, but as they age, their friends are more influential in regards to trying new forms of hunting and shooting.

Many respondents indicated that magazines, television, and newsletters from hunting/wildlife groups or organization are the most preferred forms of media with regard to hunting and shooting information and entertainment. However, while media is influential, more respondents indicated an invitation from a friend or family member would be sufficient to motivate them to try a new hunting or shooting activity.

Overview

The purpose of this project is to help improve hunting and shooting sports marketing efforts by describing how current hunters and shooters can be encouraged to try bear hunting. In order to achieve this, a custom survey was fielded through NSSF member organizations from June 2017 to August 2017. Qualified survey respondents were those who participated in hunting or recreational shooting at least once within the past three years. Qualified respondents were asked questions about their introduction and evolution through various hunting and shooting activities. Previous and current activities as well as activities they would be interested in trying were all evaluated. With this understanding, and with further insights also provided regarding the forms of media used for hunting and shooting information and entertainment, R3 programs can be enhanced or developed that motivate current hunters and shooters to try activities, thus fostering growth and reducing drop-out rates.

The sample for this study included individuals recruited by NSSF partners and member organizations. Because of this, the results put forth in this study are not representative of the population of hunters and shooters, but rather the constituency of NSSF partner organizations and member companies who fielded the survey. The results are best interpreted when understood relative to each other.

Hunting – Overview

This section includes responses from individuals who have gone hunting with a firearm, bow, or crossbow within the past three years.

- The majority (55.6%) of hunters began hunting by pursuing small game (Table 8).
- Most hunters (59.9%) began hunting with their father, but now find their friend (53%) is more influential when it comes to trying new hunting methods or targeting new species.
- More respondents indicated that an invitation from a friend / family member would help them try hunting new species or hunting with new methods than any other option (Table 26).

Table 15) Lapsed Species Supplementary Table: This was calculated measuring the difference between the species that a respondent has ever hunted, and selecting those species that they have hunted within the past three years. The “count” column represents the number of hunters who indicated that they have hunted a given species, but they have not hunted that species within the past 3 years. Percentages were calculated using the count data and the overall number of hunters who have ever hunted a given species.

Hunting Interest

Table 18) Please check which of the following species you would be interested in hunting:

This could be:

- Species that you currently hunt, and would be interested in hunting with a new method;
- Activities that you previously tried and do not currently do, but are interested in doing again;
- Activities that you have never done, and are interested in trying for the first time.

Bear Hunting

This section includes only those responses from individuals who do not currently bear hunt, but would be interested in doing so. Further chapters will note data collected from those who currently bear hunt and would like to hunt with a different firearm, bow or crossbow.

- The majority (63%) of those who are interested in hunting bear began hunting because they wanted to spend time with friends and family who already hunted.
- More than one-third (37.3%) of those interested in hunting bear have shot sporting clays with a shotgun within the past 3 years (Table B.18).
- Almost half (45%) of those who could be persuaded to bear hunt by an invitation from a friend or family member have used YouTube within the past 3 months for hunting entertainment or gathering information on hunting (Table B.26).

Deer Hunting

This section includes only those responses from individuals who do not currently deer hunt, but would be interested in doing so. Further chapters will note data collected from those who currently deer hunt and would like to hunt with a different firearm, bow or crossbow.

- More than half (54.3%) of those interested in hunting deer have hunted upland game birds within the past 3 years (Table D.13).
- 48% of those interested in deer hunting have gone shooting with an MSR within the past 3 years (Table D.17)
- Half (50.5%) of those who could be persuaded to deer hunt by an invitation from a friend or family member have used YouTube within the past 3 months for hunting entertainment or gathering information on hunting (Table D.26).

Elk Hunting

This section includes only those responses from individuals who do not currently elk hunt, but would be interested in doing so. Further chapters will note data collected from those who currently elk hunt and would like to hunt with a different firearm, bow or crossbow.

- The majority (63%) of those who are interested in hunting elk began hunting because they wanted to spend time with friends and family who already hunted.
- More than one-third (37.3%) of those interested in hunting elk have shot sporting clays with a shotgun within the past 3 years (Table B.18).
- Almost half (45%) of those who could be persuaded to elk hunt by an invitation from a friend or family member have used YouTube within the past 3 months for hunting entertainment or gathering information on hunting (Table B.26).

Predator Hunting

This section includes only those responses from individuals who do not currently predators hunt, but would be interested in doing so. Further chapters will note data collected from those who currently predators hunt and would like to hunt with a different firearm, bow or crossbow.

- The majority (62.2%) of those who are interested in hunting predators began hunting because they have always been interested in hunting (Table P.10).
- 41.4% of those interested in hunting predators have shot sporting clays with a shotgun within the past 3 years (Table P.18).
- Almost half (45.0%) of those who could be persuaded to predator hunt by an invitation from a friend or family member have used YouTube within the past 3 months for hunting entertainment or gathering information on hunting (Table P.26).

Turkey Hunting

This section includes only those responses from individuals who do not currently turkey hunt, but would be interested in doing so. Further chapters will note data collected from those who currently turkey hunt and would like to hunt with a different firearm, bow or crossbow.

- The majority (61.3%) of those who are interested in hunting turkey began hunting because they wanted to spend time with friends and family who already hunted (Table T.10).
- 41.4% of those interested in hunting turkey have shot sporting clays with a shotgun within the past 3 years (Table T.18).
- About two-fifths (42.9%) of those who could be persuaded to turkey hunt by an invitation from a friend or family member have used YouTube within the past 3 months for hunting entertainment or gathering information on hunting (Table T.26).

Upland Game Hunting

This section includes only those responses from individuals who do not currently upland game hunt, but would be interested in doing so. Further chapters will note data collected from those who currently upland game hunt and would like to hunt with a different firearm, bow or crossbow.

- The majority (61.9%) of those who are interested in hunting upland game began hunting because they have always been interested in hunting (Table U.10).
- More than one-third (38.2%) of those interested in hunting upland game have shot sporting clays with a shotgun within the past 3 years (Table U.18).
- Almost half (45.7%) of those who could be persuaded to bear hunt by an invitation from a friend or family member have used YouTube within the past 3 months for hunting entertainment or gathering information on hunting (Table U.26).

Waterfowl Hunting

This section includes only those responses from individuals who do not currently waterfowl hunt, but would be interested in doing so. Further chapters will note data collected from those who currently waterfowl hunt and would like to hunt with a different firearm, bow or crossbow.

- The majority (62.1%) of those who are interested in hunting waterfowl began hunting because they wanted to spend time with friends and family who already hunted (Table W.10).
- Almost half (44.8%) of those interested in hunting waterfowl have shot sporting clays with a shotgun within the past 3 years (Table W.18).
- 47.1% of those who could be persuaded to waterfowl hunt by an invitation from a friend or family member have used YouTube within the past 3 months for hunting entertainment or gathering information on hunting (Table W.26).

Waterfowl Hunting with a Shotgun

There are 435 individuals who are seriously interested in hunting waterfowl with a shotgun. Of those, the majority have hunted waterfowl at some point in the past. However, only 17 of the individuals in this sample have hunted waterfowl in the past 3 years; these individuals have hunted waterfowl with other methods, and would now be interested in hunting waterfowl with a shotgun.

Table WS.1) **Sample frame**

Waterfowl Hunting with a Traditional or Compound Bow

There are 435 individuals who are seriously interested in hunting waterfowl with a shotgun. Of those, the majority have hunted waterfowl at some point in the past. However, only 17 of the individuals in this sample have hunted waterfowl in the past 3 years; these individuals have hunted waterfowl with other methods, and would now be interested in hunting waterfowl with a shotgun.

Wild Hog Hunting

This section includes only those responses from individuals who do not currently wild hog hunt, but would be interested in doing so. Further chapters will note data collected from those who currently wild hog hunt and would like to hunt with a different firearm, bow or crossbow.

- The majority (61.4%) of those who are interested in hunting hog began hunting because they have always been interested in hunting (Table H.10).
- 43.9% of those interested in hunting wild hog have shot sporting clays with a shotgun within the past 3 years (Table H.18).
- Almost half (43.7%) of those who could be persuaded to hog hunt by an invitation from a friend or family member have used YouTube within the past 3 months for hunting entertainment or gathering information on hunting (Table H.26).

Wild Hog Hunting with a Traditional or Compound Bow

There are 435 individuals who are seriously interested in hunting wild hog with a shotgun. Of those, the majority have hunted wild hog at some point in the past. However, only 17 of the individuals in this sample have hunted wild hog in the past 3 years; these individuals have hunted wild hog with other methods, and would now be interested in hunting wild hog with a shotgun.

Wild Hog Hunting with a Traditional Rifle

There are 435 individuals who are seriously interested in hunting wild hog with a shotgun. Of those, the majority have hunted wild hog at some point in the past. However, only 17 of the individuals in this sample have hunted wild hog in the past 3 years; these individuals have hunted wild hog with other methods, and would now be interested in hunting wild hog with a shotgun.

Recreational Shooting Overview

This section includes only those responses from individuals who have gone target shooting with a firearm, bow, crossbow, or air rifle within the past three years.

- The majority (60.5%) of shooters began when they were younger than 10 years old (Table 8).
- Most hunters (59.9%) began hunting with their father, but now find their friend (53%) is more influential when it comes to trying new hunting methods or targeting new species.
- More respondents indicated that an invitation from a friend / family member would help them try hunting new species or hunting with new methods than any other option (Table 26).

Interested Recreational Shooting Activities

Table 29) Please check which types of firearms, bow, or crossbow you would be interested in using for recreational shooting activities that you do not currently participate in:

This could be:

- activities that you previously tried and do not currently do, but are interested in doing again;
- new activities with a firearm that you currently use;
- activities that you have never done, and are interested in trying for the first time.

Recreational Shooting with a Semi-Automatic Handgun - Overall

This section includes responses from individuals who are interested in trying a semi-automatic handgun activity that they do not currently participate in; some individuals (82.3%) have shot with a semi-automatic handgun within the past three years, while the remainder have not. Further chapters will be dedicated to specific target shooting activities, and will exclude all individuals who currently participate in that activity.

- More than one-third (35.6%) of those interested in trying new shooting activities with a semi-automatic handgun are interested in shooting steel challenge (Table H.19).
- About half (48.1%) of those interested in shooting ISPC with a semi-automatic handgun have found their friends to be the most influential person when it comes to trying new and different target shooting activities (Table H7.21).

Recreational Shooting with a Revolver - Overall

This section includes responses from individuals who are interested in trying a revolver activity that they do not currently participate in; some individuals (71.8%) have shot with a revolver within the past three years, while the remainder have not. Further chapters will be dedicated to specific target shooting activities, and will exclude all individuals who currently participate in that activity.

- of those who have lapsed revolver activities, 37.8% did so because they no longer had time to shoot revolver (Table V.16).
- About one-third (35.4) of those interested in shooting IDPA have not yet done so because they don't have anybody to go with (Table V6.19).
